

2010 Annual Statistics— from Nuts & Bolts up ...

Asia Pacific Energy Consulting's (APEC) Annual Statistical Surveys cover refinery configurations and construction, product balances, product specifications, trade patterns and condensate markets. All surveys are prepared in Excel format to aid industry analysis and include a 1-hour consultation by phone to summarize trends in this often complex statistical mosaic . The annual statistics package contains seven modules:

- 1] Asia-Pacific Refinery Configurations & Construction - 2010, 2013, 2015
- 2] Mideast Gulf Refinery Configurations & Construction - 2010, 2013, 2015
- 3] Asia Pacific Major Petroleum Product Balances—2009
- 4] Mideast Gulf Major Petroleum Product Balances—2009
- 5] Asia-Pacific Petroleum Product Quality—2009 through 2015
- 6] Mideast Gulf Petroleum Product Quality—2009 through 2015
- 7] Condensate East of Suez Balances (Output by Field; Demand by Sector; Imports by grade; Exports)

We take a bottoms-up approach, assembling the nuts-and-bolts of the situation to build an overview. As in a mosaic, APEC's annual statistical surveys build a big picture from many small details.
